2009  
DIGITAL CAMERAS

### About the performance of Face Recognition function

Recognition performance varies greatly depending on shooting conditions, i.e., according to factors such as angles, facial expression and lighting, so operation under all conditions cannot be guaranteed. Because the camera searches for faces that are similar to registered faces, there are cases where the faces are not correctly recognized when the registered image and the shooting image varies much. When facial characteristics are similar, particularly between parents and their children or brothers and sisters, the camera may not distinguish the faces.

### About Waterproof / Dustproof performance of the camera "DMC-FT1"

This camera is waterproof / dustproof equivalent to "IP58", and is possible to record at a maximum of 3.0 m depth/60 min. This does not guarantee non-destruction, non-malfunction, and water-proofing in all conditions. Please observe specified precautions and avoid product-use beyond the guaranteed underwater duration, or beyond the guaranteed depth of water.

- Attention - To prevent water leakage, confirm that there is no foreign object near card/battery door then close door by pressing until it clicks. • Use underwater up to 3.0 m depth and not longer than 60 minutes continuously. • Do not leave under low temperature in the cold climate, or where the temperature is above 40°C for a long period of time. • When the unit is splashed with detergent, soap, hot spring, bath additive, sun oil, sunscreen, chemical, etc., wipe it off immediately. • After use at the seaside or underwater, soak the unit in fresh water pooled in a shallow container for 10 minutes or less. Do not leave uncared for more than 60 minutes after using underwater. It may cause deterioration of the waterproof performance. • Foreign materials may be attached if the zoom lever or mode dial does not move smoothly. Soak the unit in fresh water, shake it well and then wash the zoom lever and mode dial with tap water. • To maintain the waterproof performance, it is recommended that the waterproof seal (with fee) is replaced at least once every 1 year at the retail store where you have bought the camera.

### About Shockproof performance of the camera "DMC-FT1"

This camera has passed a drop test from 1.5 m in height in accordance with "MIL-STD 810F Method 516.5-Shock", but this does not guarantee non-destruction, non-malfunction, and water-proofing in all conditions. Water-proofing is not guaranteed if the unit is subject to an impact as a result of being hit or dropped etc.

- Drop Test - Test standard: MIL-STD 810F Method 516.5-Shock • Drop height: 1.5m • Drop surface: 5cm thick plywood • Number of units tested: 5 • Drop orientations: 26 (each face, edge and corner) • Number of drops: 1 (for each orientation) • Unit inspected after each drop and found to be operating within product specifications. Change of appearance - paint-loss or deformation not measured.

# Night Shooting

Not Just Auto, Intelligent Auto.

Trust **iA!**

## POWER O.I.S. transforms beautiful night scenes

LUMIX cameras now render nightscapes and other dark scenes, which tend to blur due to their slower shutter speeds, with even more natural beauty. The new POWER O.I.S. image stabilizer has double\* the corrective power of previous models. That makes it possible to take startling nighttime photos with one hand. They also don't need to raise the ISO sensitivity, even in dimly lit areas, so they're able to capture photos with less noise. POWER O.I.S. is an original, advanced LUMIX technology that's leading the way for some remarkable new possibilities in compact cameras.

\*Panasonic comparison

# HD MOVIE Easy, Beautiful Movies – With LUMIX Imaging Technology

AVCHD Lite Movie with iA Mode

## Shoot HD (High-Definition) Motion Images with Ease

LUMIX cameras (FZ35/TZ7/FT1) make it even easier to take HD (1280 x 720) motion images by adding a movie button and AVCHD Lite, which lets you take beautiful, long-time HD movies. You can also use the iA mode to shoot motion images, and let the camera do all the work for you. This user-friendly mode automatically selects the most suitable Scene mode and helps correct blurring, focus and brightness problems. All you do is aim and shoot. iA is the easy way to capture beautiful HD movies.

**AVCHD** Lite

## High-Speed, High-Quality Image Processing LSI Venus Engine V and Venus Engine HD

The imaging power of LUMIX has evolved even further. Improved circuitry greatly reduces picture noise while preserving exceptional resolution, sharpness and color reproduction. The new Venus Engine V also introduces a new circuit that makes Face Recognition possible. And the Venus Engine HD boasts two CPUs which achieve the long-time HD motion picture recording in AVCHD Lite (MPEG-4/H.264) while maintaining low power consumption.

# Wider, More Beautiful Images – With LUMIX Lens Technology

\* 35mm-lens equivalent

## A Wide-Angle Lens Makes a Big Difference

The expressiveness of a wide-angle lens lies in its ability to capture spatial expanse and depth. When you want to shoot a sweeping landscape or fit all your friends in a photo when there isn't much room, there's nothing like a wide-angle lens. For example, the photo area of the 25mm wide-angle lens in the ZR, TZ and FX Series is about 196% that of an ordinary 35mm lens. The world's first 0.3-mm super-thin aspherical lens on the ZR1 fits a 25mm wide-angle lens and 8x optical zoom into a conveniently slim body.

## Renders Clear, Beautiful Images with Minimal Distortion LEICA DC LENS

The Leica DC lens inherits both its name and its outstanding quality from Leica Camera AG, maker of lenses renowned in the film camera world for their superb performance and compact size. The LEICA DC VARIO-ELMAR, LEICA DC VARIO-ELMARIT, and LEICA DC VARIO-SUMMICRON lenses are featured in LUMIX cameras. Each of these sophisticated lens systems includes several aspherical lenses to compensate for spherical aberration. And each features an advanced multi-coating process that is applied to lens surfaces to help prevent fogging caused by flare and ghosts caused by excessive light.

\*Leica is a registered trademark of Leica Microsystems IR GmbH. Leica DC lenses are manufactured using measurement instruments and quality assurance systems that have been certified by Leica Camera AG based on the company's quality standards.

NEW  
ZR1

Keep your travel memories fresh.  
With a compact 25mm wide-angle lens, an 8x optical zoom,  
and POWER O.I.S.

1x (Wide 25mm\*) \*35mm-lens equivalent

8x Optical Zoom With POWER O.I.S.

Without POWER O.I.S.

### Ultra-clear 8x zoom, POWER O.I.S., and a 25mm wide-angle LEICA DC VARIO-ELMAR lens

The compact body of the ZR1 houses a LEICA DC VARIO-ELMAR lens that ranges from 25mm wide-angle all the way to 200mm telephoto. In addition to its superb image rendering, the Leica DC lens lets you capture photos clearly without having to worry about hand-shake in all kinds of travel situations, thanks to the double\* corrective power of POWER O.I.S. as compared to previous models. \*Panasonic comparison

Without POWER O.I.S.

With POWER O.I.S.

### High-speed performance captures every shooting opportunity

Enjoy high-speed 1.1-second start-ups, AF speeds of approximately 0.27 second\*, and up to five consecutive shots at 2.3 frames per second with full resolution. You can also

take up to 330 photos with a single battery charge [CIPA]. This comfortable level of performance lets you capture even the most fleeting shutter chances.

\*At wide end; Start-up time and AF speed vary depending on shooting conditions.

### Let iA mode do all the work – get stunning shots every time

Simply switch to iA mode, and leave everything up to the camera. It automatically activates six detection and correction functions including POWER O.I.S., and lets you easily preserve your magnificent travel memories.

Intelligent Scene Selector

### Travel mode sorts your travel memories

The camera automatically arranges photos and movies using data such as the dates and locations of where they were taken. This makes it easier to enjoy your travel images in slideshows of photos and movies.

# NEW FX65

2x nighttime beauty.  
With a stylish 25mm wide-angle lens and POWER O.I.S.

## POWER O.I.S. captures crisp, clear night scenes

When shooting at night or in dimly lit places, slower shutter speeds can often result in hand-shake. This isn't a problem with the FX65, because the double\* corrective power of its improved

POWER O.I.S. provides powerful hand-shake compensation. Nightscapes are much clearer than those taken at high ISO sensitivity, and image noise is reduced. \*Panasonic comparison

## High-speed performance that instantly captures shutter chances

Enjoy high-speed 1.1-second start-ups, AF speeds of approximately 0.28 second\*, and up to five consecutive shots at 2.3 frames per second with full resolution. You can also

take up to 360 photos with a single battery charge (CIPA). This comfortable level of performance lets you reliably catch even the most fleeting shutter chances.

\*At wide end; Start-up time and AF speed vary depending on shooting conditions.

## iA mode with enhanced Face Recognition

Face Recognition, which is one of the unique iA mode functions, has now evolved even further. It adjusts the focus and exposure for the faces of people who you have registered in the camera, and the number of faces that can be registered per person

has been increased to three. This makes it possible to capture beautiful shots of special subjects with even greater accuracy. Six other corrective functions, including POWER O.I.S., are also activated for easy, fail-proof photos every time.

\*Turn the Face Recognition item on and register subjects with a full-face portrait on the shooting menu in advance. Refer to the back page for details.

## Bright F2.8, 25mm wide-angle LEICA DC VARIO-ELMARIT lens with 5x optical zoom

The 25mm wide-angle lens in this super-compact camera captures almost twice the area of an ordinary 35mm lens, making it ideal for shooting group photos indoors or wide landscapes outdoors. The 5x optical zoom pulls distant subjects up close, and the exquisite rendering of the Leica DC lens lets you capture nuanced, expressive photos. Development of the 0.3mm super-thin aspherical lens has made it possible to fit its lens system into a slim body.

# NEW FZ35

Corrective power for visibly clearer zooming.  
Hybrid still/motion images with POWER O.I.S.  
and an 18x optical zoom

## AVCHD Lite – Beautiful HD movies, extended shooting time

The FZ35 records HD movies with 1280 x 720-pixel resolution. It uses the AVCHD Lite format (MPEG-4/H.264) to achieve higher image quality while storing less data than the conventional Motion JPEG. Plus, the FZ35 is equipped with an HDMI output terminal for direct transmission of digital image and sound signals. Just connect the camera to an HDTV using a single HDMI mini cable (optional), and it's even easy to enjoy slideshow in which both still and motion images integrated in the recorded timeline.

**AVCHD Lite**

Movie button for instant recording of videos

**Creative Movie mode:** You can adjust the aperture and shutter speed any way you like. This mode gives you a wider range of expressive possibilities to explore in your movie making.

**Zoom-in movie:** You can zoom in and out while shooting movies.

**Stereo mic:** This camera features Dolby® Digital Stereo Creator, which records dynamic, true-to-life audio to bring out the power of your HD images.

**Wind cut function:** Minimizes the distracting sound you hear from the wind blowing into the mic.movies.

**iA mode (Movie):** You can also use iA mode to shoot movies, and let the camera do all the work for you.

## High-speed response for truly intuitive shooting

Enjoy high-speed 1.2-second start-ups, AF speeds of approximately 0.28 second\*, and up to five consecutive shots at 2.3 frames per second with full resolution. You can also

take up to 470 photos with a single battery charge [CIPA]. This comfortable level of performance lets you capture even the most fleeting shutter chances.

\*At wide end; Start-up time and AF speed vary depending on shooting conditions.

## Wide-angle 27mm LEICA DC VARIO-ELMARIT lens and 18x optical zoom

The bright F2.8 LEICA DC VARIO-ELMARIT lens ranges from 27mm wide-angle all the way to 486mm telephoto. Combined with the double\* corrective power of the improved POWER O.I.S., this makes it possible to capture subjects clearly without hand-shaking, even in the telephoto range. \*Panasonic comparison

Wide 27mm\*\*

18x (486mm\*\*) \*\* 35mm-lens equivalent

## My Color mode puts you in control of the color

In this mode, you can freely adjust the color, brightness and saturation parameters. This makes it easier and more fun to create interesting, expressive images. Adjust the settings that best suit the shooting conditions and your expressive intent, and then enjoy your own photography.

See pages 28 to 35 for more detailed information about the functions. ▶

# FS15

29mm wide-angle lens, 12.1 megapixels, and a range of easy-to-use functions

A simple, stylish way to enjoy time with the family.

## LEICA DC VARIO-ELMAR lens with 5x optical zoom

The 29mm wide-angle lens captures a wider area than a standard 35mm lens. This combines with the superior rendering performance of the Leica DC lens and 5x optical zoom power. In Macro Zoom mode using digital zoom, you can pull subjects even closer than the closest point possible with the wide-angle setting, and capture dramatic close-ups.

Macro Zoom

Wide 29mm\* \*35mm-lens equivalent

5x

## Large, easy-to-see Intelligent LCD

The high-resolution, 230,000-dot LCD makes it easier to frame the shot before you shoot and check the results after you shoot. It also makes it more fun to view your photos with family and friends. The FS25's LCD is 3.0 inches. The FS15's is 2.7 inches.

•Up to 400 shots\* on a single battery charge \*Based on CIPA standards

## The brightness changes to match your surroundings

The LCD brightness automatically adjusts in 11 steps to match the brightness of your surroundings. This ensures good viewability even outdoors on a sunny day, and improved viewing comfort when you're inside in a dark room.

## Easy-to-see menu display

The layout of the settings in the menu display is extremely simple, making it easy to see and switch the settings.

See pages 28 to 35 for more detailed information about the functions.

# FS12|FS7

Sleek, metallic cameras that take beautiful photos with automatic ease

Colorful designs with a playful, fashionable look.

With **iA** mode, taking a beautiful shot is as easy as pressing a button

Just press the iA button, aim and shoot. The camera does all the rest, automatically activating four detection and correction functions (see list at right). These include MEGA O.I.S., which helps prevent blurring due to shaky hands, and Intelligent ISO Control, which helps prevent motion blur when the subject won't stay still.

- MEGA O.I.S.** (Optical Image Stabilizer) helps prevent blurring when the camera shakes.
- Intelligent ISO Control** helps prevent blurring caused by subject motion.
- Intelligent Scene Selector** selects the optimal scene mode for the situation.
- Face Detection AF/AE** helps deliver clear portraits.

# LS85

Easy to use, even for beginners, with iA mode and convenient AA battery operation

With **iA** mode, getting a great shot is as easy as pressing a button

Intelligent Scene Selector

Just press the iA button, aim and shoot. The camera does all the rest, automatically adjusting to the shooting conditions and

MEGA O.I.S.

helping to correct blurring, focus, and brightness problems. The results are beautiful.

## 2.5-inch Intelligent LCD adjusts its brightness as the lighting changes

The brightness of the LS85's high-resolution, 230,000-dot, 2.5-inch LCD automatically adjusts in 11 steps to match the brightness of your surroundings. This makes it easy for you to see the LCD when you're outdoors on a sunny day and improves viewing comfort at night or in a dark room.

## Records motion images and sound

The LS85 also lets you record motion images complete with sound. The motion images are recorded in the WGA (848 x 480) format with a 16:9 aspect ratio to fit a wide-screen TV.

LS85  
-S (Silver)

See pages 28 to 35 for more detailed information about the functions. ►

# LX3

Stunning image quality with F2.0 24mm wide-angle LEICA DC VARIO-SUMMICRON lens

## Large aperture F2.0, 24mm wide-angle LEICA DC VARIO-SUMMICRON lens

Featuring 8 lens elements in 6 groups including 4 aspherical lenses, the LEICA DC VARIO-SUMMICRON lens offers a large aperture of F2.0 and 24 mm wide angle that is very helpful when shooting at higher shutter speeds in low-lit situations or for giving backgrounds a gentle soft-focus. And it provides a focal length of 24mm to 60 mm (35mm equivalent). From expansive wide-angle shooting to telephoto shots, the crystal-clear rendering and rich gradation of this lens express extremely fine details and nuances.

## Large, high-sensitivity CCD for unprecedented image quality

The newly developed 1/1.63" CCD helps capture beautiful images with outstanding dynamic range and minimal noise. By optimizing the use of space within individual photocells to allow larger photodiodes, and by purposely keeping pixel resolution at 10.1 megapixels to allow more light to enter each photocell, the CCD has exceptional sensitivity and saturation performance. Combined with re-engineered circuitry around the sensor for more stable signal outputs, the LX3 can faithfully reproduce colors even in high contrast or low-lit situations.

## Options to broaden your creative possibilities

**External Flash** DMW-FL220  
**Wide Conversion Lens** DMW-LW46\*  
**External Viewfinder** DMW-VF1  
**Leather Case** DMW-CLX3  
**Lens Adapter** DMW-LA4  
**PL Filter** DMW-LPL46\*  
**ND Filter** DMW-LND46\*  
**MC Protector** DMW-LMC46\*

\*Requires DMW-LA4 Lens Adapter.

- 24mm wide-angle lens with multiple aspect ratios
- Film mode to give photos special expression
- Selectable focusing areas
- Large, 3.0-inch, Intelligent LCD with 460,000-dot resolution
- Manual operation with joystick
- Macro shooting capability as close as 1 cm (0.03 ft)
- Versatile flash functions for 1st-curtain synchro, 2nd-curtain synchro, and consecutive shooting

LUMIX FUNCTIONS 1

Innovative LUMIX Technologies

**iA Intelligent Auto Mode (Photo)**

Press a button or turn a dial to select iA mode, and your LUMIX camera automatically activates a host of advanced functions and technologies – described below – that make it easy to capture beautiful, clear shots.

**POWER O.I.S. (Optical Image Stabilizer)**

With double\* the corrective power of previous models, POWER O.I.S. covers you even when you're shooting at slower shutter speeds. This gives you beautiful shots without hand-shake at night and in other dimly lit situations. \*Panasonic comparison

**MEGA O.I.S. (Optical Image Stabilizer)**

Built-in gyrosensors detect even slight camera movement caused by hand-shake. The system then compensates for the shake so you get clear, sharp photos.

**Intelligent ISO Control**

This system detects if the subject is moving as you shoot, and automatically adjusts the ISO setting and shutter speed accordingly to help prevent motion blur.

**Face Detection AF/AE**

This function determines if there are any faces in the photo and adjusts the focus and exposure to capture them correctly. When you take shots with the flash, digital processing minimizes the red-eye effect.\* \*Except FS42, FS4 and LS85.

**Face Recognition**

Face Recognition "remembers" faces that have been registered in the camera from previous shots, and optimizes the focus and exposure to capture them perfectly. This clever function makes it easy to get beautiful photos of loved ones in a group of people. In new models, the number of faces that can be registered per person has been increased to three. This makes it possible to capture beautiful shots of special subjects with even greater accuracy.\*Turn the Face Recognition item on and register subjects with a full-face portrait on the shooting menu in advance. Refer to the back page for details.

**Intelligent Scene Selector**

This function automatically sets the camera to whichever of five scene modes – Portrait, Night Portrait, Scenery, Night Scenery or Macro – is best for the situation. In new models, it automatically sets the camera to one of six modes, including a new Baby mode.

**Intelligent Exposure**

The camera corrects the brightness in parts of the image that are too dark due to insufficient lighting, backlighting or use of the flash.

**AF Tracking**

Once you focus on your subject, AF Tracking automatically and continuously tracks it and keeps it in focus.

Focusing Functions

**A Choice of Auto Focus Modes**

Choose the auto focus mode that best suits the situation. In addition to Face Detection AF and AF Tracking, you can choose from 1-area, 1-area high-speed, Spot, and Multi. \*The AF area setting menu varies by model. For details, please see the specifications on pages 36 to 41

**Selectable AF Area**

While using 1-area, 1-area high-speed, Spot, or Multi-area AF mode, you can specify the area out of 11 AF areas. You can thereby enjoy free framing even with the subject not at the center. Some models let you set the AF area to any location within the frame.

**AF Assist Lamp**

For use in dim lighting, this lamp slightly illuminates the subject to help the AF system focus correctly.

**Quick AF**

When the camera detects that you have assumed a shooting stance, it automatically begins focusing. This system gets you ready to catch critical shots faster than systems that don't begin focusing until you press the shutter button halfway. \*The focus speed may be slower in dark surroundings.

**Continuous AF**

The camera is always focusing, which reduces AF delays.

**Manual Focus**

You can manually focus with the joystick. And you can also use the assist function, which enlarges the center of the image to make focusing easier. The focusing area can be enlarged up to 4x and is movable.

Basic Functions

**Light Metering**

The light can be measured in three ways as a guideline for exposure: Intelligent Multiple, Center Weighted, or Spot. Simply switch the metering method to match the shooting scene or your shooting intent. \*Some models offer Intelligent Multiple metering only.

**White Balance Settings**

Choose from six preset white balance settings: Auto, Daylight, Cloudy, Shade, Flash, Halogen, and White Set. This is handy when there are several different light sources and it's difficult to get the exact coloration you want. \*White balance setting menu varies by model. For details, please see the specifications on pages 36 to 41.

**White Balance Adjustment**

When it's difficult to get the exact coloring you want, you can add bluish or reddish tones in +/-10 steps of 150 kelvins each\*. Some models let you make adjustments on both the red/blue axis and the magenta/green axis in +/- 9 steps. \*In Auto mode the white balance is determined automatically and cannot be adjusted.

**ISO Sensitivity Settings**

You can choose the light-receiving sensitivity from Auto, iISO, 80, 100, 200, 400, 800, 1600, or 3200\*. \*ISO setting menu varies by model. For details, please see the specifications on pages 36 to 41.

**ISO Limit Set**

When using ISO Auto mode, you can preset exactly the upper ISO limit that you want. This lets you shoot within the sensitivity range that you have set, to reflect your intentions in particular shooting situations.

**Auto Bracketing**

This shoots three shots at slightly graduated exposures (+/- 1/3 - 1 EV step). Pick the best of the three to keep.

Advanced Shooting Functions

**Wide-Angle Shooting**

A wide-angle lens captures a wider photo area than a standard 35mm lens. This is a big advantage when you're trying to capture the grandeur of a sweeping landscape or massive building, or when you're in a small room trying to take a group photo.

**Extra Optical Zoom**

This function provides additional magnification, extending the zoom power by using the center part of the CCD. When compared with conventional digital zoom functions that directly enlarge the image data, it provides better image quality.

**Easy Zoom Button**

Press this button once and the zoom lens instantly extends to full telescopic. Press it twice and the Extra Optical Zoom also activates and extends to full telescopic. With this quick zooming, you're ready in an instant when a great opportunity arises.

**Flash Synchro**

You can use the flash function with 1st curtain and 2nd curtain synchro settings to add an effective nuance according to the scene. The 2nd curtain synchro activates the flash just before the shutter closes, making it appear that the light source is actually behind the subject.

**Select Among 3 Aspect Ratios**

In addition to the conventional 4:3 image format, you can select the 16:9 or 3:2 format to suit the shot you're composing. 16:9 images are perfect for viewing on a wide-screen TV. \*When using a plasma display to show 16:9 images recorded on an SD Memory Card, the images may not fill the entire screen.

**Multi Aspect Mode**

The camera takes pictures in each of the three aspect ratios [4:3, 3:2, 16:9] in one go. And you can reproduce images shot with the lens set from wide end to tele end in any of three aspect ratios.

**MEGA BURST Consecutive Shooting**

The camera lets you snap off consecutive shots at up to 3 frames per second\* with full resolution. \*The maximum number of frames varies with different models and settings.

**Unlimited Consecutive Shooting**

The Unlimited Consecutive Shooting function lets you keep on shooting until the memory card is full. You can take a series of shots, then choose the one you like best and delete the rest. \*The consecutive shooting speed varies depending on the model, shooting conditions and memory card.

**Multiple Exposure**

You can take up to three exposures in a single frame. You can also apply automatic gain compensation according to your requirements.

**Film Mode**

Much like changing the film type in a film camera, you can enjoy a wide range of expression based on six color modes and three monochromatic modes.

**Color Mode / Color Effect Mode**

Choose from five or seven preset Color Mode settings: Cool, Warm, Black & White, Sepia, Natural\*, Standard\*, and Vivid\*. In some models, the bracketing function can provide three types of image. \*Not offered on all models.

**Picture Adjustment**

Choose from four picture adjustment settings: Contrast, Sharpness, Saturation and Noise Reduction. Each setting can be individually set to Low, Standard or High.

**RAW Format Compatibility**

You can record original image data directly from the CCD without any image processing. Using SILKYPiX® Developer Studio software utility, you can develop RAW data to create an image with the effect you wanted when you took the shot. \*The "PHOTOfunSTUDIO" and ArcSoft® "Mediampression™" software utilities included in the CD-ROM are designed just to convert RAW files into JPEG images.

LUMIX FUNCTIONS 2

LCD Functions

Intelligent LCD

In a brightly lit place, such as outdoors under the sun, the Auto Power LCD function increases the brightness level of the backlight by about 40% maximum in several steps. When shooting in a dark place, such as at night, the frame rate is adjusted based on the pixel mixed readout method to brighten the screen in two to three steps.

Wide-Viewing-Angle LCD

The LCD offers a wide viewing angle from any direction, making it easy to confirm images, even when looking at the screen diagonally.

High Angle Mode

Makes it easier to see the monitor while holding the camera high to shoot over a crowd.

Real-Time Histogram

This graph, which can be displayed in the LCD as you compose the shot, shows the status of the exposure and contrast in real-time.

Highlight Display

A flashing indicator on the LCD shows any parts of the image that have been overexposed.

Composition Guidelines

You can use composition guidelines from two patterns\* according to the shooting subject. And guidelines can be shown at the same time as other information and icons.

\*Not offered on all models.

Easy-to-See Menu Display

The layout of the settings in the menu display is extremely simple, making it easy to see and switch the settings.

Playback Functions

Multi Display

After shooting, enjoy viewing your photos on your LUMIX camera's LCD. View them as a slide show; display 1, 12 or 30 images at a time; or use Calendar View to see thumbnails of all the shots taken on a particular date.

Slideshow

You can watch an ordinary slide show that displays every image, or you can use Favorite Image Slideshow and specify which images to play. You can also select background music to make your slideshow even more entertaining.

Category Playback

This function sorts photos into several categories - Portrait, Scenery, Event, and others - and lets you play back the images or view slideshows of the shots in a particular category.

Personal Category Playback

Using Face Recognition technology, the camera can find photos of people you specify, and arrange a slideshow of just those photos. This is a big help, for example, when you've taken a number of photos of someone and you want to choose the best one.

Mode Playback

With this function, the camera will automatically organize all of the still and motion images that are mixed together in memory. This makes it possible to view still images, AVCHD Lite motion images and Motion JPEG images separately.

Dual-Image Playback

The dual-image playback display feature makes it easier to compare two images in detail to see the differences in focus accuracy and contrast.

9 Still Images Cut Out from a Motion Image

Motion images can be converted into a series of nine or just one snapshot. This is effective in moving scenes when you want to look carefully at the movement of a sportsperson, etc.

Image Leveling

Pictures that lean to the right or left can be corrected horizontally or vertically.

Convenient Functions

Quick Menu

You can instantly access a variety of the settings needed most often. These include white balance, ISO sensitivity, image size, compression format, auto focus mode, light metering and so on.

World Time Setting

After you select one of 74 locations on the map, the camera automatically calculates and displays the local time.

Travel Date Setting

Input the time and date of your departure before you leave home, then use the camera to capture all the best moments of your trip. When you view the photos later, the camera will display them according to the day of the trip each photo was taken.

Travel Mode

The camera automatically arranges photos and movies using data such as the dates and locations of where they were taken. This makes it easier to enjoy your travel images in slideshows of photos and movies.

Title Edit

Using the cursor button on the camera, you can edit titles onto your images - people's names, places, events or other information.

Text Stamp

When traveling, you can stamp the day of the trip on the photos you take. Or, if you have a baby, you can stamp his or her age in months and name on your photos. The stamped information appears on photos.

\*When the date is stamped on a photo, the photo is automatically resized to 3M (4.3/2.5M (3.2/2M (16.9), or the original size is maintained for photos smaller than 3M. However, you can choose either to save or overwrite the original picture.

Audio Recording

Add 5 seconds of sound to pictures as you shoot. Or, if you prefer, add up to 10 seconds of sound after shooting.

HD Output

Using an optional HDMI mini cable or component cable you can connect your LUMIX camera to an HDTV, and view your HD photos and HD movies (1080i) in stunning high-definition quality.

VIERA Link

Connect your LUMIX camera to a Panasonic VIERA TV with an HDMI mini cable (purchased separately), and it's easy to view your photos and motion images on the big screen. Just use the TV remote to select or play the images. You enjoy stunning HD images and sounds, with quick, easy connection and effortless operation.

Focus Icon

Instead of the ordinary "●" mark on the LCD that indicates when your subject is in focus, you can choose a heart, flower or three other symbols.

LUMIX FUNCTIONS 3

Movie Functions

iA Intelligent Auto Mode (Movie)

Select iA mode, and your LUMIX camera automatically activates a host of advanced functions and technologies – described below – that make it easy to capture beautiful, clear motion images.

MEGA O.I.S. (Optical Image Stabilizer)

This function fights blurring due to shaky hands as you shoot. You get crisp, sharp shots, even at high zoom levels. \*The FZ35 is equipped with POWER O.I.S.

FACE FACE Detection AF/AE

This function detects when there are faces in the frame, and automatically adjusts the exposure, contrast, skin complexion effect, and focus so they turn out perfectly. It can find up to 15 faces in a frame.

Intelligent Scene Selector

This function senses the shooting conditions and selects the scene setting (Portrait, Scenery, Low Light, or Macro) that will provide the best results.

Intelligent Exposure

This function continually checks the ambient light level and adjusts the exposure setting as conditions change, preventing blown highlights and blocked shadows.

HD Movie

You can shoot high-quality HD motion images in the progressive format, which minimizes flicker. The 1280 x 720-pixel images provide spectacular viewing on a large-screen HDTV. If you're using a LUMIX model that features the AVCHD Lite (MPEG-4/ H.264), you can record for a longer time without running out of memory because AVCHD Lite stores less data than the conventional Motion JPEG.

Movie Button

Press this button and the camera starts recording right away, regardless of whether it's in Rec or Play mode. You're ready to shoot quickly when there's a sudden shooting opportunity.

Zoom-in Movie

You can zoom in and out while shooting motion images, just like with stills.

Movie Scene Modes

17 different scene modes including sports, portrait, low light, surf and snow modes make it easy to get great motion images in specific situations.

Wind Cut

A digital circuit detects the wind direction and velocity and adjusts the directivity of the microphones accordingly. This dramatically reduces both wind noise and sound degradation in the low frequency range.

Stereo Microphone

The LUMIX cameras are the first\* in the industry to feature Dolby® Digital Creator sound. In addition to recording voices clearly, this high-quality system captures audio that conveys the atmosphere of the shooting location. \*As of January 27, 2009.

Optional Functions

Tele Conversion Lens

Increases your total zoom power. Gives you the power to bring even more distant objects into range.

Wide Conversion Lens

Increases the field of view at lower zoom settings, so you can shoot a wider area.

Close-up Lens

This lens is excellent for impressive macro photography. The distance to the subject is reduced to between 40 and 50 cm (1.31 to 1.64 ft) in telephoto shots. Better depth of field and enlargement.

MC Protector

Protects the camera lens from scratches and other damage.

ND (Neutral Density) Filter

Reduces light intensity by 3 aperture stops and allows slower shutter speeds.

PL (Polarizing) Filter

Helps eliminate reflections while preserving the naturally vivid colors of the subject.

External TTL Flash

Provides perfect lighting for shots of subjects farther away in the dark.

External Viewfinder

This compact optical viewfinder attaches to the hot shoe. It comes with a 24mm frame (35mm camera equivalent).

Marine Case

Explore the exciting world of underwater photography. You can also use this waterproof case for worry-free shooting in wet weather, at the beach, or on the ski slopes.

Component Cable

This cable lets you connect your LUMIX camera directly to an HDTV, so you can view your HD photos and HD movies (1080i) with the incredible resolution, detail and vibrancy today's HDTVs provide.

HDMI Mini Cable

This cable lets you send your still photos and motion images (and the accompanying soundtrack) from the camera directly to an HDTV, with virtually no degradation.

Included Software

PHOTOfunSTUDIO

This clever software sorts photos into practical folders that are created automatically as you upload the photos from the camera to a PC. The folders and their icons are linked with your LUMIX by the Rec mode or Scene mode names. The software\* also lets you use your PC to view AVCHD Lite movies that you record with LUMIX. \*Version 3.0 HD Edition or 4.0 HD Edition only.

SILKYPIX® Developer Studio

This application lets you produce high-resolution images from RAW data recorded with your camera. In addition to adjusting the exposure and white balance, it lets you perform advanced color conversions, correct lens aberrations, and eliminate noise in dark areas of the image.

ArcSoft® Panorama Maker™

Use this to stitch together photos that you took in Panorama Assist mode. You can easily create incredible, natural-looking panorama photos.

Rec. Mode (Mode Dial / Mode Button)

iA Intelligent Auto Mode

This mode not only helps eliminate blurring from hand-shake or subject movement, it also helps you capture perfect portraits by detecting the face and selecting the focus, exposure and Scene mode that get the best results. And it's all automatic.

Normal Picture (Program AE) Mode

The camera automatically determines the subject's brightness and sets the aperture and shutter speed accordingly. You can adjust the white balance, ISO sensitivity and other settings\*. \*These settings can be adjusted in all modes except Motion Picture mode.

Macro (Close-up) Mode

Use this mode to take incredible close-ups. You can focus on subjects within about 5 cm (0.16 ft) of the lens\*. \*3 cm (0.098 ft) for the ZR1, FX65, and TZ series / 1 cm (0.03 ft) for the FZ35 and LX3, when shooting with the lens in the wide-angle setting. (Show feet in inches, and show inches first, cms second).

Tele Macro

Set the zoom to maximum telephoto and you can take shots at a mere 1 m (3.28 ft) from the subject, with the background in soft focus.

Macro Zoom

Using the digital zoom function, you can pull subjects even closer than the closest point possible with the wide-angle setting, and capture dramatic close-ups.

P Program AE Mode

The camera makes the optimal aperture and shutter speed settings for you.

A Aperture Priority AE Mode

Set the aperture to between F2.8 and F8.0\* to obtain the desired depth of field. \*This range varies by model. For details, please see the specifications on pages 36 to 41.

S Shutter Priority AE Mode

Set the shutter speed between 1/2000 and 60 seconds to freeze or emphasize movements.

M Manual Exposure Mode

You have full control over both the shutter speed and aperture.

Motion Picture Mode

You can shoot smooth motion images at 30 fps, complete with sound, in WVGA (848 x 480) or VGA size (640 x 480). Some models can also record motion images in high definition (720p). When viewing the results, you will be suitably impressed by displaying 16:9 motion images on a large-screen HDTV.

M Creative Movie Mode

You can adjust the aperture and shutter speed any way you like. This mode gives you a wider range of expressive possibilities to explore in your movie making.

My Color Mode

You can freely adjust the color, brightness and saturation parameters. This makes it easier and more fun to create interesting, expressive images.

C1/C2 Custom Mode

You can store in memory up to three sets of frequently used settings, such as the Scene mode, white balance and AF and photometry modes. Later, you can instantly recall those settings by selecting Custom mode.

Clipboard Mode

You can take photos of maps, timetables and other travel info. They are saved in a separate folder of the built-in memory to distinguish them from normal photos.

Advanced SCN Modes

In Scenery, Portrait, Sports, Night Portrait and Close-up modes, you can select additional, more detailed settings, such as Normal, Indoor, Outdoor, and Creative.

Portrait	Normal, Soft Skin, Outdoor, Indoor, Creative
Scenery	Normal, Nature, Architecture, Creative
Sports	Normal, Outdoor, Indoor, Creative
Night Portrait	Night Portrait, Night Scenery, Illuminations, Creative
Close-up	Flower, Objects, Food, Creative

MS My SCN Mode

You can register the Scene modes you use most often, and then select them instantly when you need them.

SCN SCN Modes

Select one or two of the modes on the following page to suit the shooting situation. You can also access a help screen that explains what each mode is for.

LUMIX FUNCTIONS 4

SCN (Scene) Modes

**Portrait Mode**  
Adjusts the exposure and coloration so that skin tones look true and natural.

**Soft Skin Mode**  
Softens the tone in skin-color areas, making minor blemishes and wrinkles less noticeable.

**Scenery Mode**  
Provides quick focusing and crisp detail - especially good for shooting landscapes or scenery.

**Sports Mode**  
Uses a higher shutter speed, making it possible to catch clear, sharp, dynamic action shots.

**Panning Mode**  
Conveys a sense of motion by capturing a moving subject in crisp focus and blurring the background.

**Night Portrait Mode**  
For portraits against nighttime scenery, using a flash. Hold the camera firmly and the subject should keep still for at least 1 second.

**Night Scenery Mode**  
For taking a picture with night scenery. Shutter will be set to max. 8 sec. Be sure to use a tripod.

**Self-Portrait Mode**  
Aim the camera at yourself, wait for the LED to light up (indicating that you're in focus), and take the shot.

**Food Mode**  
Good for taking shots of special meals, this mode assures that colors are fresh, vivid and natural in all kinds of lighting.

**Party Mode**  
For indoor shots. Colors come out more naturally with artificial light.

**Candle Light Mode**  
Lets you capture the naturally warm color of scenes lit by candles.

**Fireworks Mode**  
Uses a slower shutter speed to capture the glittering beauty of fireworks.

**Starry Sky Mode**  
For shots of the night sky or other nighttime scenes with exposures of up to 60 seconds.

**Beach Mode**  
Avoids underexposure of the subject in strong sunlight.

**Aerial Photo Mode**  
For shooting through an airplane window.

**Snow Mode**  
Exposure and white balance are set to reproduce snow in its true whiteness.

**High Sensitivity Mode**  
Raises the ISO sensitivity, which lets you shoot at a higher shutter speed to prevent blurred shots of moving subjects. \*3M (4:3), 2.5M (3:2) or 2M (16:9) is selected as the picture size; Note that resolution is significantly lower at this setting.

**Baby Mode (1 and 2)**  
Skin tones are slightly softened to enhance beauty. Input the date of your baby's birthday, and keep a running photographic record as he or she grows up. You can also input your baby's name. You can set two birth dates to track two different children.

**Underwater Mode**  
Intended especially for underwater use with the optional Marine Case, this mode gives photos natural coloring even when the subject is lit by only a small amount of light.

**Sunset Mode**  
Emphasizing red tones, this mode is designed to capture clear, vivid shots of colorful sunsets.

**Pet Mode**  
Because pets often won't hold still, this mode switches the camera to Intelligent ISO Control, which helps prevent motion blur. If you input your pet's date of birth, its age in months (at the time a photo was taken) is displayed when you view photos. You can also input the pet's name or other.

**Hi-Speed Burst Mode**  
You can capture a crucial moment with perfect timing. \*3M (4:3), 2.5M (3:2) or 2M (16:9) is selected as the picture size.

**Flash Burst Mode**  
You can take consecutive flash shots without having to wait for the flash to recharge. \*3M (4:3), 2.5M (3:2) or 2M (16:9) is selected as the picture size.

**Pin Hole Mode**  
The light intensity at the periphery of the shot image is reduced to make the picture look as if it was shot with a pinhole camera.

**Film Grain Mode**  
This mode converts the image to a monochromatic picture and then enhances the contrast to create a film grain effect.

**Transform Mode**  
You can expand or contract the image in the horizontal direction to create a different, fun photo. Expansion/contraction can be set in 5 steps.

Slimming

Normal

Stretching

**Panorama Assist Mode**  
This mode helps you take a series of images for use in a panorama photo, checking to ensure that adjacent shots have sufficient overlap. \*You can use ArcSoft® Panorama Maker™ software (included with the camera) to stitch the images into a single panorama photo.

**Photo Frame Mode**  
You can compose your shot while displaying one of the borders registered in the camera. This is a quick, easy way to produce photos with attractive borders. \*The picture size is automatically resized to 2M (or below).

**Beach & Surf Mode**  
This mode prevents both the blue cast that typically occurs with images recorded underwater and the blown highlights that often result in photos taken on bright days at the beach.

**High Dynamic Mode**  
This mode allows you to take artistic photos that contain both dark and bright areas. You can select either of three options, Standard, Art, or B/W, depending on the desired effect and taste.

Standard

Art

Playback Mode									

\*Number of shots may vary depending on memory card size, battery power, picture size, and compression. The consecutive shooting speed varies depending on the shooting conditions and memory card.  
\*\*Based on the CIPA standard. Shooting conditions: 23°C with 50% humidity; LCD on; using SD Memory Card; starting to shoot 30 seconds after turning on the power; shooting once every 30 seconds with the flash in full operation

for every other shot; changing the zoom setting from telephoto to wide, or wide to telephoto, for each shot; and temporarily turning the power off after each 10 shots [long enough to lower the battery temperature]. The number of recordable pictures decreases in Auto Power LCD mode or Power LCD mode.

## Battery Life in Recording HD Motion Pictures (Approx.)

Model	Format	Mode	Continuous Recording Time	Actual Recording Time
FZ35	AVCHD Lite	SH	2 h 30 min	1 h 20 min
	Motion JPEG	HD	2 h 30 min	1 h 20 min
TZ7	AVCHD Lite	SH	1 h 30 min	40 min
	Motion JPEG	HD	1 h 30 min	40 min
FT1	AVCHD Lite	SH	1 h 40 min	1 h
	Motion JPEG	HD	1 h 40 min	1 h

•When you set the picture quality to HD, WVGA or VGA, we recommend using a high-speed card with "10MB/s" or greater displayed on the package. •SD speed class is the speed standard regarding continuous writing. •Motion pictures can be recorded continuously for up to 15 minutes in some countries. •Continuous recording exceeding 2GB is not possible when recording Motion JPEG. Remaining time for continuous recording is displayed on the screen. •These are standard times taken at a temperature of 23°C (73.4°F) and a humidity of 50%. •The time available for recording varies depending on the environment, the interval between recordings, and the manner of use. •Actual recordable time is the time available for recording when repeating actions such as switching the power supply [ON]/[OFF], starting/stopping recording, zoom operation etc.

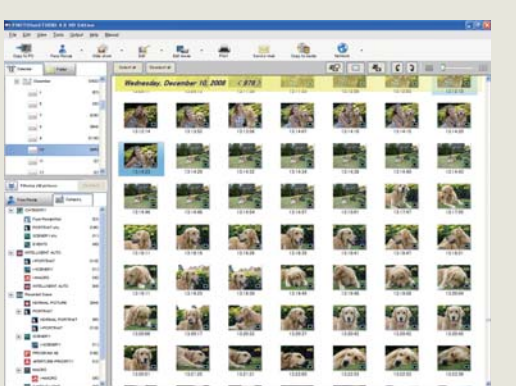

## Minimum Illumination

FZ35 (Aperture : F2.8)	6 lux (Low light mode) / 4 lux (Creative Movie mode, ISO 6400) / 1.2 lux (Creative Movie mode in MF and Manual Exposure, ISO 6400, 1/8 sec)
TZ7 / FT1 (Aperture : F3.3)	7 lux (Low light mode)

## Included Software

### PHOTOfunSTUDIO 3.0 / 4.0

This PC software lets you edit or organize a collection of photos with more ease and fun. It features a Face Recognition function that recognizes the faces in the pictures stored in your PC to sort them by faces for you regardless of the camera type you used. Through the sophisticated interface, you can also enjoy emotion-packed slideshows with a variety of effects and music. Motion images can also be uploaded directly to YouTube™. Furthermore, with the PHOTOfunSTUDIO 3.0 HD Edition (included in the TZ7/FT1) or 4.0 HD Edition (included in the FZ35), AVCHD Lite movies can be transferred to a PC from an SDHC/SD Memory Card or via the USB cable to view or even edit them. You can also make a DVD disc from the AVCHD Lite files by converting them to MPEG-2.

## Options that give you more comfort. More creativity. More fun.

### Wide Conversion Lens

DMW-LW46 (0.75x)  
(for LX3\*)

### Tele Conversion Lens

DMW-LT55 (1.7x)  
(for FZ35\*)

### Close-Up Lens

DMW-LC55  
(Focal length: 500mm)  
(for FZ35\*)

The zoom range is restricted to a magnification of 3x to 18x.

### Lens Adapter

DMW-LA3 (for FZ35)  
DMW-LA4 (for LX3)

\*Use of the lens adapter is required.

### External Flash

DMW-FL220 (GN22)  
(for LX3)

DMW-FL360 (GN36)  
(for LX3)

DMW-FL500 (GN50)  
(for LX3)

### ND Filter

DMW-LND46  
(for FZ35/LX3\*)

### PL Filter

DMW-LPL46  
(for FZ35/LX3\*)

### MC Protector

DMW-LMC46  
(for FZ35/LX3\*)

\*Use of the lens adapter is required.

### External Optical Viewfinder

DMW-VF1 (for LX3)

### Marine Case (to a depth of 40 m/131 ft)

DMW-MCTZ7 (for TZ series)  
DMW-MCFT1 (for FT1)  
DMW-MCZX1 (for ZR1)

\*Usable external strobe produced by INON. For more details, see [http://www.inon.co.jp/INON\\_TOP\\_e.shtml](http://www.inon.co.jp/INON_TOP_e.shtml)

### SD Memory Card

#### Pro High Speed

32 GB\*: RP-SDV32G

16 GB\*: RP-SDV16G

8 GB\*: RP-SDV08G

4 GB\*: RP-SDV04G

2 GB\*: RP-SDV02G

#### High Speed

12 GB\*: RP-SDM12G

6 GB\*: RP-SDM06G

4 GB\*: RP-SDM04G

2 GB\*: RP-SDM02G

1 GB\*: RP-SD R01G

\*1 GB = 1 billion bytes. Usable capacity will be less.

### HD Component Cable

DMW-HDC2

(for ZR1/FP8/FX series/LX3)

### AV Cable

DMW-AVC1 (for LS85)

### DC Coupler

DMW-DCC2 (for LS85)

DMW-DCC4

(for FX65/FX580/FS series)

\*Use of the AC Adapter is required, DMW-AC6 for DMW-DCC2 and DMW-AC5 for DMW-DCC4.

### Battery Pack

CGA-S005 (for LX3/FX180)

CGR-S006 (for FZ35)

DMW-BCG10 (for ZR1/TZ series)

DMW-BCF10

(for FX65/FP8/FX580/FT1/FS series)

### Carrying Case

DMW-CLX3 (for LX3)

DMW-CZ18 (for FZ35/LX3)

•Some accessories are not available in some countries.

# Living in High Definition with LUMIX

LUMIX lets you easily record and view both stills and movies in high definition.

**HD  
PHOTO**  
1920x1080

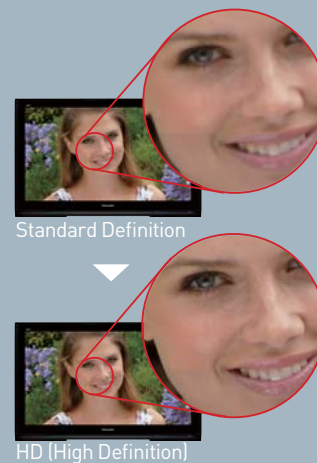

## HD PHOTO

All LUMIX models record wide-screen, 16:9, full-HD (1920 x 1080-pixel) images. These images are simply breathtaking when displayed on an HDTV, which handles about four times the data of a standard-definition TV. With LUMIX, you can enjoy a whole new style of HDTV viewing with family and friends.

**HD  
MOVIE**

## HD MOVIE

In addition to capturing beautiful photos, LUMIX lets you shoot high-quality HD movies in the progressive format, which minimizes flicker. You get 1280 x 720-pixel motion images that look spectacular on a large-screen HDTV. If your LUMIX model uses the AVCHD Lite (MPEG-4/H.264), you can record longer motion image clips without running out of memory because AVCHD Lite stores less data than the standard Motion JPEG.

### Connect Directly to an HDTV

#### HDMI Mini Cable

When a LUMIX camera with an HDMI output terminal is connected via an HDMI mini cable (purchased separately) to a VIERA Link-equipped TV and the VIERA Link function is turned on from the camera menu, you can use the TV's remote control to run the slideshow.

\*HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing LLC.

#### HD Component Cable DMW-HDC2

### Easy HD Image Viewing with the SD Card Slot

#### High-Definition Plasma TV

It's easy to view photos or AVCHD Lite movies shot with your LUMIX camera. Just take the SD memory card from the camera and put it in the VIERA Image Viewer, and use the TV's remote control. \*To play movies recorded in the Motion JPEG format, you need the included AV cable or a video cable.

#### Blu-ray Disc™ Player

Using the Slideshow playback feature, you can play a music CD at the same time you're showing the HD photos and movies, so you get both beautiful images and your favorite music.

\*AVCHD Lite motion images recorded onto an SD Memory Card or a DVD disc cannot be played from a device that does not support the AVCHD standard.

## EVERLASTING MEMORIES

OUR PLACE - The World Heritage

is a worldwide photographic project proudly supported by Panasonic.

The project aims to present the 851 sites designated as having "outstanding universal significance" by the UNESCO World Heritage Committee to a wide global audience.

There are special places that humankind must preserve for the enjoyment of future generations.

Around the world professional photographers are already at work capturing images of these beautiful and dramatic locations exclusively with LUMIX digital cameras.

With its ability to reproduce detailed images with true to life colours and no quality degradation, Digital photography, with is ideal for preserving these important places and memories.

Panasonic, by supporting the UNESCO Partnered OUR PLACE project is committed to preserving the World's Heritage and to helping create a new photographic culture.
